WE HANDLE EVERY DETAIL
WITH EXPERIENCE YOU CAN COUNT ON.

EIS provides encapsulation, overcoating and painting of new and existing steel and concrete bridges and similar structures throughout the U.S. In addition, EIS performs lead paint abatement and asbestos abatement, including the removal of asbestos containing textured coatings from concrete bridges. Since 2006, clients have counted on EIS to deliver exceptional service and turnkey solutions to move your project forward in a timely and safe manner.

OUR SERVICES

ENCAPSULATION AND OVERCOATING

With our skilled team and in-house technology, we provide turnkey services to abate or encapsulate/overcoat bridges and other structural steel, offering hand tool spot abatement and water blasting to meet all specifications for restoration or aesthetics.

BRIDGE & STRUCTURE PAINTING

We offer painting of new and existing steel and concrete bridges, walls, and barrier rails. We own the proper equipment to prep all surfaces prior to painting, including hydro blasting technology. We ensure all steps are in compliance with local, state, and federal regulations, and deliver results that will help to keep your infrastructure safe and sound for years to come.

HYDRO BLASTING TECHNOLOGY / WATER & ABRASIVE BLASTING

Ultra-high pressure (up to 40,000 PSI) water blasting "Spin-Jet" coating removal. The result is an emission-free system that leaves a clean, dry surface. This process can also be used for coatings containing lead, asbestos, and other hazardous and non-hazardous materials.

LEAD ABATEMENT

As a licensed lead abatement contractor, we can handle the complete lead abatement process, including testing, removal, disposal, and recoat or painting of the structure.

ASBESTOS ABATEMENT

As a multi-state licensed asbestos abatement contractor, we can perform asbestos abatement of the following from bridges: textured coating from concrete bridge components, expansion joints, conduit, piping, guard rail pads and various caulks and sealants.

SUSPENDED SCAFFOLDING AND TEMPORARY WORK PLATFORMS

We offer cable and decking-type work platforms and scaffolding for under-bridge access over water or elevated structures.

We have the necessary equipment to access the various work levels of a bridge safely and efficiently with minimal disruptions.

TRAFFIC CONTROL

Our team will provide all necessary traffic controls and lane shutdowns day or night with the ability to perform bridge abatement and removal services.
