

FUEL POLISHING & RESTORATION

WE HANDLE EVERY DETAIL WITH EXPERIENCE YOU CAN COUNT ON.

EIS delivers industry-leading tank and fuel quality maintenance solutions for convenience stores, fuel suppliers, bulk plants, manufacturers, military installations, transport facilities, and emergency generator sites across the nation. Our services are tailored to meet client-specific demands while ensuring strict adherence to local, state, and federal regulations.

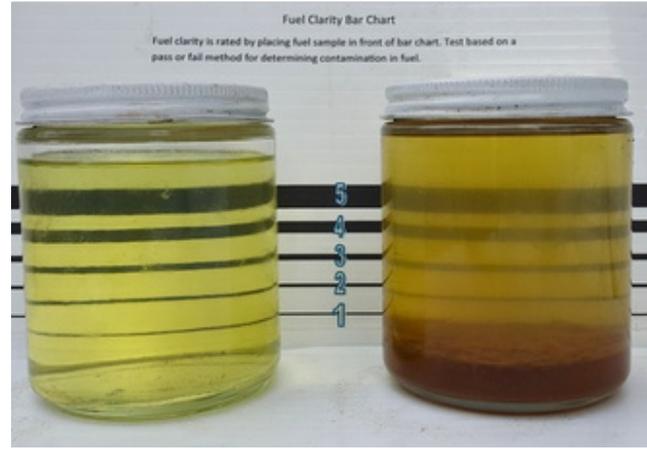

RETURNING YOUR FUEL QUALITY TO THE HIGHEST INDUSTRY STANDARDS.

Our service can eliminate fuel quality issues, clogged filters, tank sludge, and restore the fuel and tank to its original state. Let us keep you up and running with an annual maintenance program or provide you with a one-time cleaning event.

-  Fuel Sampling & On-Site Analysis
-  Fuel Polishing & Restoration
-  Water & Rust Contamination Removal
-  Algae & Microbial Growth Treatment
-  Assistance with Cross-Drop Contamination
-  NELAC Certified Laboratory Testing

MINIMIZE DOWNTIME, MAXIMIZE TURNOVER

Contaminated fuel leads to equipment failure, accelerates corrosion, and creates costly downtime. Unlike standard fuel cleaning, EIS's proprietary multi-stage filtration system **removes particulates and biomass** down to 1 micron while our specially formulated additives actively restore fuel integrity.

From **above and underground storage tanks to emergency generators**, our certified technicians and fully equipped fleets handle all fuel systems with precision and efficiency. Whether diesel, gasoline, or ethanol-blended fuels, our advanced restoration process **eliminates water contamination** (reducing it down to <50 ppm), reverses phase separation in ethanol-enriched gasoline, and removes sludge, microbial growth, and **rust via rare-earth magnet filtration**.

What truly sets EIS apart is our ability to deliver these exceptional results with remarkable efficiency. Our state-of-the-art, high-flow filtration systems process fuel at an industry-leading rate of 100 gallons per minute, significantly **reducing operational downtime** while restoring fuel to peak quality. This rapid yet thorough treatment process translates directly to **cost savings** and peace of mind for your business, ensuring your fuel meets all quality and compliance standards without disrupting your operations.

From emergency situations to preventive maintenance, EIS provides the complete solution for fuel quality management - protecting your equipment and your bottom line, and your reputation in the marketplace.
